## PROJECTS

**DeepFake Detection Technology**

- Developed a deep learning model to identify and flag AI-generated fake videos and images by analyzing visual inconsistencies and artifacts, helping verify digital content authenticity.

**Ai Powered Phishing Email Detector**

- Developed a machine learning-based system to detect and flag phishing emails by analyzing email content, headers, and patterns. The model identifies suspicious emails, helping improve cybersecurity and protect users from potential threats

**AI Web Research Agent**

- The AI Web Research Agent searches and aggregates online applies intelligent analysis to deliver concise answers, and allows users to interact with findings through a clean, responsive interface.
